

Reference sheet

MobyDick Quick 400

Model:

- MobyDick Quick 400
- 2 pumps with 3.600 l/m
 - 20 m³ Recycling tank

Customer:

Jacksons Quarry, Preston, England

Problem Area:

- Heavily soiled area
- High volume of traffic
- Incorporate Pre-wash
- Auto fill feature integrated into panel for water control

A special system was installed to maintain the correct water level for the whole system. A nearby Dike was used to control the water level.

An extended hose was fitted to the wash system to allow cleaning of the tippers buckets before leaving site. Water was diverted from the wash pump ensuring high pressure cleaning could be done.

The MobyDick Engineer worked with the site to optimise the efficiency of the system. Adjustments made to improve the wash process for the specific site requirements.
