

Reference Sheet

MobyDick Quick 667 B

Model:

MobyDick Quick 667 B

- Cargo Moistening System with recycling water

Customer:

Val de Loire Granulats, France
(Groupe EUROVIA)

Problem area:

- Calcareous sticky mud
- Installation without civil engineering works.
- Possibility of cargo moistening
- Up to 50 Trucks per day

The Recycling Tank is directly placed into the cavity and the gaps on the causeway side are filled up. The pumps and piping are pre-assembled at the factory.

The 2 wash elements are assembled and placed directly on a layer of gravel. The upper level of the tank is flush with the causeway level.

Placement of the side walls with the integrated spray beams and the cargo moistening system. At the end the electrical work is completed and the system is ready to be tested.
