

## Reference sheet

# MobyDick Quick 939

**Model:** Drive-Through System Type:

**MobyDick Quick 939**

- Length 939 cm, 3 wheel revolutions
- 5 "MobyPumps" with a total maximum delivery of 9,000 l/min
- A large concrete recycling pit (approx. 140 m<sup>3</sup>) constructed at the side of the wheel washing unit. The pit can be easily emptied with a wheel-loader.

**Customer:**

CCM, Wallers-Trélon, France  
(SCREG-Group)

**Problem Area:**

Site exit direct onto a public highway must be guaranteed to be kept clean. A large limestone quarry with up to 500 trucks/day. Periodical emptying of settlement pit to be simple and functional.

Recycling pit constructed out of concrete at the side of the wheel washing unit (customer supplied). 21 m long x 5 m wide

In the forefront is the pump chamber with overflow and the pit for cleaned water for use with the cargo moistening system.

Drive-down entry area for the wheel-loader protected by a peripheral handrail.
